

ADI ECKSTEIN

Raanana, Israel | 050-4849444 | adieckstein64@gmail.com | github.com/adieckstein64-max

PROFILE

Industrial Engineering and Management student (Data Analytics track) with a background in elite military service. Builds end-to-end data projects covering SQL, Python, and statistical modeling, with a focus on real methodology over polished appearances.

PROJECTS

Playoff Performance Delta Predictor | Personal project 2026

- Built a linear regression model predicting how an NBA player's efficiency (BPM) shifts from regular season to playoffs, using only pre-playoff features (age, usage rate, shooting efficiency, turnover rate).
- Sourced and cleaned real multi-season data from Basketball-Reference; used a time-based train/test split (train on one season, test on a held-out later season) to avoid data leakage.
- Reported model performance honestly against a naive baseline, including where the model did not outperform it — documented in a written analysis of limitations and sample-size constraints.
- Visualized predicted-vs-actual error with a reference line so model accuracy is readable at a glance, not just from a metrics table.
- Tools: Python (pandas, NumPy, matplotlib), regression modeling, data cleaning from unstructured web sources.

NBA Team Cap Efficiency Dashboard | Personal project 2026

- Built a SQL analysis (SQLite: CTEs, JOINS, RANK/PERCENT_RANK window functions) ranking all 30 NBA teams by wins generated per dollar of committed payroll, using live-scraped Basketball-Reference data.
- Delivered results as an interactive React dashboard (sortable table, scatter visualization, no external chart library) with a stated methodology and data-limitation section rather than an oversimplified headline.
- Designed the UI/UX myself: sortable columns and a color-coded quadrant legend so results are scannable at a glance rather than requiring a read of every row.
- Tools: Python, SQL (SQLite), data scraping and cleaning, React, UI/UX design.

Label Pulse: Innervisions vs. Keinemusik | Personal project 2026

- Built a SQL analysis (SQLite: CTEs, RANK() and SUM() OVER window functions) comparing release cadence and roster depth across two electronic music labels, using data pulled live from Discogs' public API.
- Deduped 758 raw catalog entries down to 217 canonical releases by catalog number; surfaced a real cross-label artist overlap (Rampa) rather than an assumed one.
- Designed and built the dashboard UI (cadence line chart, side-by-side roster bar charts) in the same interaction pattern as the Cap Efficiency dashboard, for portfolio-wide consistency.
- Tools: Python, SQL (SQLite), Discogs API, React, UI/UX design.

EXPERIENCE

DJ & Event Producer | Self-Employed 2020 - Present

- Manages a self-owned brand end-to-end: marketing, client negotiations, and live event logistics.
- Handles complex audio-visual setups and real-time technical troubleshooting during live performances.

Personal Fitness Instructor | Icon Fitness Apr 2023 - Oct 2023

- Designed personalized, goal-oriented fitness programs for a diverse client base.
- Managed client scheduling and progress tracking.

SKILLS

Python (pandas, NumPy, Matplotlib) · SQL (MySQL, window functions, CTEs) · Data Analysis (Power BI, Tableau) · UI/UX Design (Figma) · Advanced Excel (data modeling & analysis)

EDUCATION

B.Sc. Industrial Engineering and Management | Afeka College of Engineering 2024 - Present

Full Matriculation Certificate | Metro-West High School 2016 - 2019

MILITARY

Special Forces Sergeant | Paratroopers Commando Brigade 2019 - 2022

- Elite combat unit service; team leadership and high-pressure decision-making under operational conditions.

Active Reserve Duty | Paratroopers Commando Brigade Oct 2023 - Present

VOLUNTEERING

Logistics Coordinator | Mechayim LeChayim 2019 - Present

- Active weekly volunteer (every Friday) coordinating food delivery logistics for Holocaust survivors and families in need, managing volunteer routes via a dedicated application and optimizing distribution across delivery zones.
